

Research Scientist Opportunity in Metabolomics

We are seeking a full-time analytical biochemist with expertise in mass spectrometry to join the Mootha lab at Massachusetts General Hospital and Howard Hughes Medical Institute. We combine genomics, systems biology, and human investigations to study metabolism utilizing a holistic approach. Our team is a mix of highly enthusiastic biochemists, physicians and bioinformaticians.

The applicant will collaborate closely with group members to develop methods, run samples, and analyze data. The ideal candidate should have ample hands-on experience independently operating and maintaining LC-MS and GC-MS instrumentation with a proven track record of full scan analysis, targeted measurements, and quantitation in complex biological samples. The primary instruments in our lab are a Thermo Q-Exactive+ LC-MS and a Thermo Exactive GC-MS.

This is a rare opportunity to be a part of a dynamic and highly collaborative research team. The compensation will be very competitive while also affording opportunities to be co-author on many exciting basic and translational papers.

Job Requirements

- Graduate or industry training in analytical chemistry with strong practical and theoretical expertise in LC-MS and GC-MS including separations techniques.
- Proven track record of LC-MS and GC-MS application to metabolomics and stable isotope tracer experiments.
- Proficiency with data acquisition and analysis software (such as TraceFinder, Compound Discoverer, XCalibur, Progenesis).
- Strong computational skills to independently analyze data with standard statistical tools and methods.
- Excellent oral and written communication skills to interact with colleagues and technical support.

Key Functions

- Independently provide regular maintenance for our LC-MS and GC-MS. Interact with technical support to perform preventative maintenance and address any technical issues that arise.
- Develop LC-MS and GC-MS methods to detect and quantify metabolites, drugs, and related compounds.
- Interact closely with lab members to plan and perform experiments at every stage from sample collection and preparation to data collection and analysis.
- Efficiently organize lab use of LC-MS and GC-MS to optimize throughput of samples.
- Contribute to preparation of manuscripts, grants and scientific presentations.

To learn more about the lab please visit: <http://mootha.med.harvard.edu/>

To apply, please send a cover letter and CV to Rohit Sharma (rsharma2@partners.org). Our ad can also be found at through the HHMI [portal](#).
